Summary

Software Engineer and final-year BSc Computer Science and Engineering student at American International University-Bangladesh, majoring in Software Engineering (CGPA 3.70/4.00). Experienced in independently developing full-stack applications and multi-tenant SaaS systems for Byte Innovations, including HR management, recruitment workflows, and a corporate career portal. Skilled in backend APIs, relational databases, secure authentication, and collaborative software development, with academic research in reinforcement learning and requirements engineering.

Professional Experience

Byte Innovations | **Software Engineering Intern** | Dhaka, Bangladesh

1 September 2026 - 30 November 2026 (3-month internship)

Expert HRMS (SHOCHOL) - Ongoing Development

https://shochol.xyz/

Technologies: Laravel 12, Vue 3, TypeScript, MySQL, Docker, Cloudflare

- Independently developing a multi-tenant HRMS with isolated tenant databases, subdomain-based workspaces, and role-based authorization.
- Implementing employee management, attendance, leave approvals, payroll, income-tax processing, audit logs, and secure PDF documents.

Expert ATS - Ongoing Development

https://expertats.b-innovations.com/

Technologies: Next.js 16, React 19, NestJS 12, TypeScript, PostgreSQL, Prisma

- Independently building a multi-tenant applicant tracking platform with organization workspaces, job publishing, recruitment pipelines, and permission-based access.
- Developing secure REST APIs, candidate profiles, resume processing, and consent-aware AI-assisted recruitment and shortlisting workflows.

Byte Innovations Corporate Website - Live

https://www.b-innovations.com/

Technologies: Next.js 16, React 19, JavaScript, MongoDB Atlas, Nodemailer, Vercel

- Independently designed, developed, and deployed a responsive corporate website with services, portfolio showcases, and Google Analytics.
- Built dynamic MongoDB job listings, career applications with resume uploads, validated contact forms, and SMTP email notifications.

Expert POS - Team Collaboration

https://expertpos.xyz/

Technologies: Laravel, PHP, MySQL, JavaScript

- Contributed to selected development tasks and enhancements within a shared Laravel-based POS and business management application.
- Collaborated with team members on a system supporting sales, inventory, purchasing, accounting, and multi-location operations.

MD. NAZMUS SADAT NUMAN Software Engineer

Technical Skills

Programming: TypeScript, JavaScript, Python, PHP, C#, Java, C++, SQL, PL/SQL

Frontend: React, Next.js, Vue 3, HTML5, CSS3, Tailwind CSS

Backend: NestJS, Laravel, Node.js, ASP.NET Core MVC, REST APIs, JWT, RBAC

Data & ORM: PostgreSQL, MySQL, MongoDB, Oracle Database, SQL Server, Prisma, Eloquent

Tools & Platforms: Git, GitHub, Git CLI, Terminal, Shell Commands, Postman, Docker, Vercel, Cloudflare

Operating Systems: macOS (Unix-based), Windows 11

Research Experience

Adaptive Human Recognition via Sequential Reinforcement Learning and Evidence-Driven Module Selection | BSc Thesis, 2026

- Co-researched a budget-aware human recognition framework using Double-DQN, face, appearance, posture, and scene-context evidence.
- Evaluated a 600-identity protocol against seven baselines; the thesis reports 62.0% mean top-1 accuracy over 10 seeds.

RE-M3S: Requirements Engineering Maturity Model for Remote-First SaaS Startups | Research Manuscript, 2026

- Co-designed a five-level, eight-dimension requirements engineering framework for distributed SaaS teams.
- Analytically assessed 390,625 possible profiles with a conservative lower-median scoring approach.

Academic Projects

Solix Clothing Brand - Full-Stack E-commerce Platform
https://github.com/sadatnuman/Solix-Clothing-Brand.git
Technologies: NestJS, Next.js, React, PostgreSQL, JWT, RBAC

- Developed a full-stack e-commerce application with secure JWT authentication, role-based access, cart, checkout, and order processing.
- Designed a normalized PostgreSQL database and implemented inventory validation, payment workflows, administrative analytics, and email notifications.

NewsArchive - News Management System
https://github.com/sadatnuman/News-Archive-.Net-Core-MVC-3-tier-Architecture-.git
Technologies: ASP.NET Core MVC, C#, SQL Server, 3-Tier Architecture

- Built a news management platform using three-tier architecture, the Repository Pattern, and dependency injection.
- Implemented content CRUD, advanced search, filtering, trending and recommendation features, and role-based authentication.

University Admission Management System
https://github.com/sadatnuman/University-Admission-Management-System-DBProject.git
Technologies: Oracle Database, SQL, PL/SQL, Stored Procedures, Triggers

- Designed a normalized relational database covering applicants, programs, applications, payments, and admission evaluation.
- Implemented PL/SQL packages, stored procedures, database triggers, complex queries, and exception handling.

AI Content Detection using BERT & RoBERTa
https://github.com/sadatnuman/AI-Content-Detection-using-BERT-RoBERTa.git
Technologies: Python, NLP, Machine Learning, BERT, RoBERTa

- Developed an NLP text-classification workflow using pretrained BERT and RoBERTa models to distinguish AI-generated from human-written text.
- Evaluated model outputs using accuracy, precision, recall, and F1-score for comparative classification analysis.

Education

BSc in Computer Science and Engineering | 2026 (Final Year)
American International University-Bangladesh (AIUB) | Major: Software Engineering | CGPA: 3.70 / 4.00

Higher Secondary Certificate (HSC), Science | 2021
Trust College, Uttara | GPA: 5.00 / 5.00

Certification & Affiliations: Cisco IT Essentials (2022); IEEE Student Member & IEEE Computer Society Member (2025)
